

CEWELD G1

TYPE	Copper-coated unalloyed solid rod for gas welding. (OI, R45)						
APPLICATIONS	The CEWELD G1 is designed for gas welding unalloyed steels. This process is primarily used for welding plates, pipes, and other profiles where low strength is required.						
PROPERTIES	The CEWELD G1 is designed for gas welding unalloyed steels with a minimum tensile strength of 250 MPa. The resulting joints are homogeneous and soft, and the mechanical properties are excellent.
